

The Life Cycle of a Frog

Describe each stage of a frog life cycle.

Use the PowerPoint and the Internet to write about the development of a frog. Include lots of detail and pictures where you can!

Information	Picture
<p>Stage 1 Frogs eggs are laid in a group in the water by a frog. After about 6-21 days, these eggs hatch into tadpoles</p>	
<p>Stage 2 The tadpoles spend it's time swimming in the water, eating and growing. Tadpoles have a tail swimming with. it usually takes them 6-9 weeks to fully develop as a tadpole, however some types of frogs may take much longer.</p>	
<p>Stage 3 Around week 12, the tadpole sprouts legs [and then arms], has a longer body, and a bigger head. it breaths underwater but it still has a tail.</p>	

The Life Cycle of a Frog

Describe each stage of a frog life cycle.

Stage 4

The adult frog breathes air and has no tail. the growth cycle, from egg to frog takes between 12-16 weeks.
