

The Life Cycle of a Frog

Describe each stage of a frog life cycle.

Use the PowerPoint and the Internet to write about the development of a frog. Include lots of detail and pictures where you can!

Information	Picture
<p>Stage 1 Frog eggs are laid in a group in the water by a frog. After about 6-21 days, these eggs hatch into tadpoles.</p>	
<p>Stage 2 The tadpole spends its time swimming in the water, eating and growing. Tadpoles have a tail for swimming with. It usually takes them 6-9 weeks to fully develop as a tadpole, however some types of frogs may take much longer.</p>	
<p>Stage 3 Around week 12, the tadpole sprouts legs [and then arms], has a longer body, and has a bigger head. It breathes under the water and still has a tail.</p>	

The Life Cycle of a Frog

Describe each stage of a frog life cycle.

Stage 4 The adult frog breathes and has no tail. This growth cycle, from egg to frog takes between 12 to 16 weeks
